Deep Joshi

+91 92656 41668 | 24bce152@nirmauni.ac.in | github.com/deeplumiere

Interested in Computer Vision Research managing collaboration for EvalEval Coalition (worked with UK AI Security Institute, FutureSearch, HuggingFace and beyond). **US-Citizen, open to move, based in India right now.**

EDUCATION

B.Tech, Computer Science & Engineering — *Nirma University, Ahmedabad*

Aug 2024 - Aug 2028 (Expected) | CGPA: 8.5/10

- Coursework: Computer Networks, Database Management Systems, System Architecture, Machine Learning
- 2× NASA SpaceApps Global Nominee · IEEE Tech Explorers Challenge Finalist · Kaggle Dataset Expert · Studying MIT16.485 - Visual Navigation for Autonomous Vehicles

SKILLS

- **Languages: Python**, C++, C#, JavaScript, PHP
- **ML / CV: PyTorch**, OpenCV, MediaPipe
- **Backend & Data:** Django, **PostgreSQL**, Apache Parquet
- **Tools:** Linux (Fedora), Angular, **GitHub Certified**

EXPERIENCE

Software Engineering Apprentice— *LetSetGo, Ahmedabad*

Jul 2025 - Present

- Built and maintained REST APIs (PHP, Python) for the company's mobile app, serving 20K+ users, and worked on 5 feature updates.
- Designed a dynamic form-generation system for hospital software.
- Worked on MySQL schema design for features in a mobile application; worked on backend APIs for the features built and team working.

Student Member — *EvalEval Coalition (Global)*

Jun 2026 - Present

- Managing community sourced datastore infrastructure named EveryEvalEver; worked on cron jobs and **onboarding organisations** to the datastore.
- Managing collaborations for the organisation with various institutes, like UK AI Security Institute blog here, FutureSearch and beyond.
- Worked on data integration for AI Inference Scaling Paper, contributed with

Chair (previously Technical Head) — *IEEE Computer Society, Nirma University*

Sep 2025 - Present

- Founded the chapter's technical team, moved to leadership role recently.
- Built technical infrastructure bottom-up, managing 8 repos on GitHub.
- Built a global network with collaborations spanning from IEEE Richmond Section to various colleges globally.

PROJECTS

FoViT — Recurrent Foveated Vision Model — *CVPR 2027*

Nov 2025 - Present

- Designed and trained a 6.8M-parameter recurrent foveated vision model from scratch, reaching 79% top-1 accuracy on ImageNet-1K and 72.6% on VTAB — entirely on a single 8GB-VRAM GPU.
- Built the full pipeline end-to-end (architecture, training, evaluation); advised by Nisarg Patel and Raj Parekh (at Google).

DeepSkills — Agentic Pipeline — deeplumiere.github.io/DeepSkills

May 2026 - Present

- Built a content-extraction and reformatting pipeline processing 100+ pages per run, with automatic Mermaid diagram generation and LaTeX integration
- Shipped as reusable Model Skills for Antigravity and GitHub Pages
